Advances in Practical Applications of Heterogeneous Multi-Agent Systems

The PAAMS Collection

12th International Conference, PAAMS 2014
Salamanca, Spain, June 4-6, 2014
Proceedings
Preface

Research on agents and multi-agent systems has matured during the last decade and many effective applications of this technology are now deployed. An international forum to present and discuss the latest scientific developments and their effective applications, to assess the impact of the approach, and to facilitate technology transfer, has become a necessity and was created a few years ago.

PAAMS, the International Conference on Practical Applications of Agents and Multi-Agent Systems, is the international yearly event for presenting, discussing, and disseminating the latest developments and the most important outcomes related to real-world applications. It provides a unique opportunity to bring multi-disciplinary experts, academics, and practitioners together to exchange their experience in the development and deployment of agents and multi-agent systems.

This volume presents the papers that were accepted for the 2014 edition of PAAMS. These articles report on the application and validation of agent-based models, methods, and technologies in a number of key application areas, including: agent-oriented software engineering, conversations, motion coordination and unmanned aerial vehicles, Web and service systems, robotics exploration, smart cities and infrastructures, and social systems. Each paper submitted to PAAMS 2014 went through a stringent peer review by three members of the international committee composed of 97 internationally renowned researchers from 26 countries. From the 52 submissions received, 12 were selected for full presentation at the conference; another 14 papers were accepted as short presentations. In addition, a demonstration track featuring innovative and emergent applications of agent and multi-agent systems and technologies in real-world domains was organized. There were 19 demonstrations shown and this volume contains a description of each of them.

We would like to thank all the contributing authors, the members of the Program Committee, the sponsors (IEEE SMC Spain, IBM, AEPIA, AFIA, University of Salamanca and CNRS), and the Organizing Committee for their hard and highly valuable work. Their work helped contribute to the success of the PAAMS 2014 event. Thanks for your help – PAAMS 2014 would not exist without your contribution.

Yves Demazeau
Franco Zambonelli
Juan Manuel Corchado
Javier Bajo
Organization

General Co-chairs

Yves Demazeau  
Centre National de la Recherche Scientifique, France
Franco Zambonelli  
University of Modena and Reggio Emilia, Italy
Juan M. Corchado  
University of Salamanca, Spain
Javier Bajo  
Polytechnic University of Madrid, Spain

Advisory Board

Frank Dignum  
Utrecht University, The Netherlands
Toru Ishida  
University of Kyoto, Japan
Jörg P. Müller  
Technische Universität Clausthal, Germany
Juan Pavón  
Universidad Complutense de Madrid, Spain
Michal Pechouček  
Czech Technical University in Prague, Czech Republic

Program Committee

Emmanuel Adam  
University of Grenoble, France
Carole Adam

Domain and Subtask-Adaptive Conversational Agents to Provide an Enhanced Human-Agent Interaction ......................................................... 134
   David Griol, José Manuel Molina, and Araceli Sanchís de Miguel

Dynamic Scheduling of Ready Mixed Concrete Delivery Problem Using Delegate MAS ............................................................. 146
   Shaza Hanif and Tom Holvoet

Handling Safety-Related Non-Functional Requirements in Embedded Multi-Agent System Design ......................................................... 159
   Jean-Paul Jamont, Clément Raievsky, and Michel Occello

The Multi-agent Patrolling Problem Theoretical Results about Cyclic Strategies .................................................................................. 171
   Fabrice Lauri, Jean-Charles Créput, and Abderrafiaa Koukam

Representation of Interactions in a Multi-Level Multi-Agent Model for Cartography Constraint Solving .................................................. 183
   Adrien Maudet, Guillaume Touya, Cécile Duchêne, and Sébastien Picault

Practical Application of Matchmaking Problem: Trainee Allocation for Teachers ................................................................................ 195
   Maxime Morge and Eric Piette

A Control Architecture of Complex Systems Based on Multi-agent Models .......................................................................................... 207
   Tomás Navarrete Gutiérrez, Laurent Ciarletta, and Vincent Chevrier

Monitoring Oil Pipeline Infrastructures with Multiple Unmanned Aerial Vehicles .................................................................................. 219
   Jakub Ondráček, Ondřej Vaněk, and Michal Pěchouček

Planning When Goals Change: A Moving Target Search Approach ................................................................. 231
   Damien Pellier, Humbert Fiorino, and Marc Métivier

Agent Clusters: The Usual vs. The Unusual ......................................................................................................................... 244
   Kavin Preethi Narasimhan and Graham White

An Agent-Based Architecture to Model and Manipulate Context Knowledge ...................................................................................... 256
   Ludo Stellingwerff and Giovanni E. Pazienza

Practical Applications of the Web-Based Agent Platform ‘Eve’ ........................................................................................................... 268
   Ludo Stellingwerff, Jos de Jong, and Giovanni E. Pazienza

Multi-Armed Bandit Policies for Reputation Systems .................................................................................................................. 279
   Thibaut Vallée, Grégory Bonnet, and François Bourdon
