31 Supp **Fig.S1** Chromatogram (A306) of medium extracts of *Silybum marianum* cultures transformed with  
32 a *Vitis vinifera* stilbene synthase gene. A, cultures treated with 100  $\mu$ M MJ and 15 g/L hydroxypropyl- $\beta$ -  
33 CDs for 3 days . B, cultures treated with 100  $\mu$ M MJ and 15 g/L hydroxypropyl- $\beta$ -CDs coated with  
34 magnetic Fe<sub>3</sub>O<sub>4</sub> nanoparticles for 3 days. Inset: UV spectra of the peak corresponding to *t*-resveratrol at  
35 retention time of 12.4 min.

47 Supp **Fig. S2** Chromatogram (A288) of a medium extracts of *Silybum marianum* cultures transformed  
 48 with *Cicer arietinum* chalcone synthase gene. A, Cultures treated with 100  $\mu$ M MJ and 15 g/L  
 49 hydroxypropyl- $\beta$ -CDs for 3 days . B, Cultures treated with 100  $\mu$ M MJ and 15 g/L hydroxypropyl- $\beta$ -CDs  
 50 coated with magnetic Fe<sub>3</sub>O<sub>4</sub> nanoparticles for 3 days. Inset: UV spectra of the peak corresponding to  
 51 naringenin at retention time of 17.5 min.

52

53

54 Supp **Table S1** Effect of hydroxypropyl- $\beta$ -CDs (30mM) on extracellular accumulation of *t*-resveratrol  
 55 and naringenin in transgenic *Silybum marianum* cultures elicited with 100  $\mu$ M methyl jasmonate.

56

	<i>t</i> -resveratrol mg/L	naringenin (mg/L)
MJ	0.075 $\pm$ 0.008	0.015 $\pm$ 0.001
MJ + HPCD	10.63 $\pm$ 1.8	3.7 $\pm$ 0.28

57

58 Metabolites were analysed after three days of treatment. Results are means  $\pm$ SD of three independent  
 59 replicates.
