The series "Advances in Intelligent and Soft Computing" contains publications on various areas within so-called soft computing which include fuzzy sets, rough sets, neural networks, evolutionary computations, probabilistic and evidential reasoning, multi-valued logic, and related fields. The publications within "Advances in Intelligent and Soft Computing" are primarily textbooks and proceedings of important conferences, symposia and congresses. They cover significant recent developments in the field, both of a foundational and applicable character. An important characteristic feature of the series is the short publication time and world-wide distribution. This permits a rapid and broad dissemination of research results.

Advances in Practical Applications of Agents and Multiagent Systems

PAAMS, the International Conference on Practical Applications of Agents and Multiagent Systems is an international yearly platform to present, discuss, and disseminate the latest advances and the most important outcomes related to real-world agent applications. It provides a unique opportunity to bring multidisciplinary experts, academics and practitioners together to exchange their experience in the development of Agents and Multiagent Systems.

This volume presents the papers that have been accepted for the 2010 edition. These articles capture the most innovative results and this year's advances. Each paper has been reviewed by three different reviewers, from an international committee composed of 82 members from 26 different countries. From the 66 submissions received, 19 were selected for full presentation at the conference, and 14 were accepted as short papers. Moreover, PAAMS'10 incorporated special sessions and workshops to complement the regular program, which included 85 accepted papers.
